

Hello World (Translated)

---

## Task Overview

This is the second block (Translated)

**F files** between **Hindi and English**, in both  
o:

- Upload a PDF
  - Choose translation direction (Hindi → English or English → Hindi)
  - Download a translated PDF that retains the original structure
- 

## Functional Requirements

### Language Translation

- The app must support **two-way translation**: Hindi ↔ English
- Translation should be **intelligent**:
  - Do **not translate abbreviations or acronyms** (e.g., “AI”, “NASA”)
  - **Skip translation of fully capitalized words** (e.g., “PDF”, “ML”)
  - Ensure **contextual accuracy**

### PDF Handling

- Input PDFs may include **text, tables, images**, and **complex formatting**
- Output PDF must preserve:
  - Original **fonts and formatting**
  - **Page structure**
  - **Tables and images**
- The solution must support **multi-page PDFs**

## Web Application UI

- Simple interface to:
    - Upload a PDF file
    - Select translation direction
    - Download the translated PDF
- 

## Technical Notes

- You may use any programming language or framework (**please specify your tech stack**).
  - We encourage using Streamlit for a quick UI—consider deploying your app on Streamlit Cloud, which is free.
  - You are free to use any open-source LLM model or translation API, as long as it is **genuinely free to use at a minimum of 10 PDF translations per day**.
    - **Note: APIs that offer only a limited-time trial (e.g., Google Cloud's \$300 trial) do not qualify as free for this task.**
  - Clearly list any **libraries, models, or APIs used** in your submission.
- 

## Deployment Requirement

Please **deploy your web application** (e.g., on **Streamlit Cloud**) and include:

- A **public link** to access your live app
  - A **sample input PDF file** and the **translated output** generated via your app
- 

## Submission Instructions

- Submit your solution as a **GitHub repository** or **ZIP file**
- Include a clear **README** with setup instructions
